**Cassida Corporation Announces Compatibility with the New \$100 Bill**  
**Cassida's complete line of bill counters and counterfeit detectors is fully compatible with the new \$100 bill.**

Tualatin, OR — Cassida (<http://www.cassidausa.com>), a world leader in money handling equipment, announced today that their complete line of currency counting and counterfeit detection products is compatible with the new \$100 bill which is set to debut on Oct. 8.

“Cassida verifies the compatibility of our products with any new currency changes as part of our ongoing commitment to our customers,” said Matt Goldfain, Product Manager at Cassida North America.

Working with the U.S. Bureau of Engraving and Printing over the past few years, Cassida has ensured that its equipment remains compatible with the new \$100 bill. As a result, all Cassida products sold since May 15, 2013 are fully compatible with the new \$100 bill.

“Our goal in this multi-year project has been to make the transition to the new \$100 bill as seamless as possible for Cassida product users. A big component of this was to make our products compatible with the new \$100 bill as far in advance of the public release as possible. We are now proud to announce that nearly all legacy Cassida products sold between December 15, 2009 and May 15, 2013 are already compatible with the new \$100 bill and require no calibration or upgrades. Our customers can continue using our products the same way they have been and notice no difference.” said Matt Goldfain Product Manager, Cassida North America

A limited number of Cassida 3310 and 3300 counterfeit bill detectors purchased before May 15, 2013 require a software upgrade. Customers can easily determine whether their product requires the upgrade and arrange for quick service, if needed by visiting <http://cassidausa.com/new100.html>.

**About Cassida Corporation**

Cassida Corporation designs and markets money handling equipment, including currency counters, coin counters and counterfeit currency detection devices. Since 1999, Cassida has used its research and experience in money printing and security to assure accuracy in the most demanding counting environments on the globe, across multiple countries and currencies. The corporation's North American operations are in Tualatin, Oregon. For more information go to [Cassidausa.com](http://Cassidausa.com) or call (888) 800-0303.
